

Adventure Pilot

The iFly 700™ by Adventure Pilot Sports Many New Features with Version 5 Software Update.

McKinney, TX / April 19, 2011 -- Adventure Pilot LLC, announces the release of Version 5 Software Update. This update will now provide iFly 700™ users with new features like NMEA output support ("aka Autopilot"), Automatic Airspace Alerts, and improved Airport Information Page, Vertical Speed and many other new features. As with all iFly 700™ updates, the Version 5 Software Update is available for existing users to download via a simple "Update Package" from the iFly 700™ Update page. This software update is included with all new purchases as well as in the VFR-\$69 and VFR+IFR-\$89 Annual Data Update Subscriptions for all current iFly owners. Nobody gets left behind.

"Based on the current feedback from our numerous beta testers of the Version 5 Software Update, we truly believe pilots are going to be very impressed with our latest features and enhancements," states Walter Boyd, President of Adventure Pilot.

Type	Time	FDZ	Class	Name	City, ST
Apr 7	0207L	0604	G37E	FLYING EAGLE RANCH	SALT FLAT, TX

Apr 47	0207L	0637	23G	FARMER	FARMER, TX
Apr 40	0247L	0620	127	HORIZON	EL PASO, TX

New Features

The iFly 700™ Version 5 Software Update provides useful new features such as Autopilot compatibility, Runway Extensions, VST (Vertical Speed to Target) Instrument, Day/Night Mode, Auto Airspace Alerts, Auto Track Mode and much more. The iFly 700™ GPS users can now connect the iFly 700 to an EFIS, Fuel Flow Computer or drive an Autopilot with the iFly 700™ NMEA data output. Safety and pilot confidence is enhanced with Auto Airspace Alerts. This new feature allows pilots to select type, distance and altitude buffer notification parameters. Also, pilots can choose to be notified with a Pop Up window or a more discrete Alert Button. After exploring the sectional or charts, the new Auto-Track Mode automatically resumes tracking current position within a user-defined period of time.

The new Runway Extension feature will now display a guidance feather extended from the selected runway. The VST Instrument (Vertical Speed to Target) displays the target decent rate to reach pattern altitude at your desired distance from the airport. The Day/Night mode provides visual comfort as it darkens all chart modes and inverts colors on various information pages for night operations. "These exciting new features are just a few examples of what pilots can expect with the Version 5 Software Update. For those considering the iFly 700, this is our testament to our constant innovation and advancement of the iFly 700," states Boyd. Full details on the software release can be viewed on the iFly Forums.

User Enhancements

Following the Version 5 Software Update data subscribers will enjoy an improved Airport Information Page that features a polished page layout, adjustable font size, runway thumbnails, and a button for nearby airports. A list of nearest airports can easily be displayed with distance, direction, estimated time enroute and other details straight from any of the moving map modes with the touch of a button. Additional airport information provided includes fuel availability, runway width, city, and lighting schedule. Faster chart transitions and chart expiration warnings are also part of this update, allowing sectional charts to be viewed beyond expiration dates.
